A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on November 9, 2009 has been entered.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Minami et al in view of Yamaji et al.

Minami et al teach a semiconductor manufacturing system where sheet 13 of Minami et al can be an aluminum plate of high thermal conductivity, which would be a direct heating element, and heaters 12 would inherently provide radiant heating to the interior of the main body. However, the main body does not cover the entire couplings 6. Yamaji et al show another semiconductor manufacturing fluid system with heat tape 11 extending the entire length of the device, including the pipe end joint shown in Figure 1 and Yamaji et al is read as including the pipes which would conduct fluid to the gas stick. Both references teach the purpose of the heaters as for preventing the reliquification of the gas being transported, and it is believed that it is readily evident that the presence of a cold section is contrary to such purpose. It would have been obvious for one of ordinary skill in the art at the time the invention was made to have made the main body and the heating elements of Minami et al of sufficient length to cover the

entire device, such as the joints, as taught by Yamaji et al to more effectively prevent reliquification of the gas therein by eliminating cold sections.

Applicant's arguments have been fully considered but they are not persuasive.

It is noted that the joint shown in Attachment A is not disclosed in the instant specification and is not a part of the claimed device. The joint shown is accepted for the purposes of discussion as it is a common and well known Prior Art coupling to the instant invention.

Applicant argues against the combination because the coupling members 24 of Yamaji et al are not encapsulated by the tape. However, the proposed rejection contemplates encapsulating the joints of Minami et al within the holders to heat the joints thereof.
